

The parameters of the classification.

The system is based on the division of the entire production range of the ABM into five classes on the basis of certified analytical data relating to the density of the final product and the amount of total and reduced dry extracts. Its purpose is to highlight the main organoleptic characteristics of the individual products to encourage an informed and conscious purchase and facilitate the choice of the product that best corresponds to the consumer's needs for use.

Class	Density	Extract dry reduced	total extract
1 seal	from 1,060 to 1,089	from 30 to 50	from 135 to 220
2 seals	from 1,090 to 1,119	from 35 to 65	from 210 to 295
3 seals	from 1,120 to 1,149	from 40 to 80	from 285 to 380
4 seals	from 1,150 to 1,249	from 45 to 115	from 360 to 690
5 seals	over 1.25	from the 60	from 620
